**VISION**

To be a center of excellence for producing proficient and socially responsible women electrical engineers for industry outreach through quality education and research

**MISSION**

M1: To empower the students with skills in current trends through effective teaching- learning process for professional growth. M2: To foster an eco-system for higher education and research in Electrical Engineering through constant industry interaction. M3: To facilitate practical expertise in enterprise development and energy environment by promoting innovation and social consciousness.

**PROGRAM EDUCATIONAL OBJECTIVES (PEOS)**

Graduates will be able to  
 PEO1: Possess strong educational foundation in Electrical Engineering for making successful careers in core and allied industry.  
 PEO2: Develop solutions for realistic problems in the society through innovation and lifelong learning.  
 PEO3: Exhibit communication skills, leadership qualities, social and environmental responsibility, ethical values in successful career.

 5. S.Anees Fathima  
 Student

**Message by Academic Director:**

I congratulate the students on their success in securing placements in reputed institutions. I wish them the very best in future.

Prof. A. Seshu Rao

**From the Principal's Desk:**

Congratulations students. It is in deed a proud moment for us to see you getting placements and carve out a new journey onwards.

Dr. J. Sudhakar, Principal

**Thoughts from the Head of the Department :**

I thank our faculty for supporting and guiding our students to achieve great success in campus placements.

Dr. K. Durga Syam Prasad, HoD. EEE

**Augmented Reality**

Augmented reality is an immersive technology that overlays images and information onto real life, to bridge the gap between the digital world and the physical one, in real-time. AR differs from virtual reality, which is an entirely artificial environment that the software creates. The construction industry, specifically electrical engineers, can benefit from the use of this technology to ease the construction process. There are products out there like Microsoft's HoloLens that partner with Trimble to bring augmented reality into the industry. This functions as a tool to provide information about the job while contractors are working it.

**WHEN LIGHTNING STRIKES, IT FLOWS FROM THE CLOUD TO THE GROUND, BUT THE PART WE SEE IS ACTUALLY THE CHARGE GOING FROM THE GROUND BACK UP INTO THE CLOUD.**

*Happy Teacher's Day*

**Teaching**

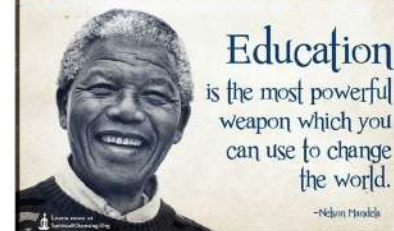

is a very noble profession that shapes the character, caliber, and future of an individual. If the people remember me as a good teacher that will be the biggest honour for me."

- A. P. J. Abdul Kalam

A life of joy and happiness is possible only on the basis of knowledge and science.

Happy Teachers Day

#### Social media-is it a boon or bane?

Digital revolution has taken over India and it's people in a large way. There is hardly any person without a smart phone or access to social media platforms like WhatsApp, Facebook, twitter, Instagram, TikTok etc. The younger generation who are lovingly called the millennials are driving this social media in a big way. News got revolutionalized with 24/7 newschannels who were bringing minute to minute updates on things happening in any part of the world. With these social media platforms the world has become closer and people more accessible. News are not only updated every minute but you can discuss and post your views regarding it. People who are introvert and don't like to share their views with others don't hold themselves back on these platforms.

Now the big question is how useful these social media platforms have been or are they are curse in disguise? During the Covid times we have seen people using these platforms effectively to help each other. Minute to minute update on hospital bed availability, oxygen availability and other important updates from the government were available through Twitter, Facebook, WhatsApp which helped the needy in a big way. People used these platforms to discuss matters of national importance like Nirbhaya Case and other instances where justice was needed. Government had to act because people were questioning them. Politicians are also not behind and have been using these platforms to spread their messages and activities to bring more awareness among people. They are a source of entertainment and people have been using Instagram and TikTok to exhibit their hobbies and talents. They have also become powerful tools of marketing where people can market their products easily without spending large sums of money on other modes of advertising. With so many good things we can't ignore the ill effects of these platforms. Unfortunately today's children spend more time on social media than with their families. There is no proper regulation over the content available by any regulatory bodies. False news too spread fast causing great damage at times. People are using these media to bring down people by spreading false information. They try to judge things or people without knowing the actual facts. These media can be used by wrong people to cheat others by creating false profiles. We have seen youngsters getting lured on Facebook and Instagram later leading to miserable consequences. During Covid a lot of misinformation was spread about vaccines on WhatsApp which had prevented people from getting vaccinated. So it is important to self regulate oneself and use these social media platforms judiciously else this boon will definitely become a curse.
