#### ACADEMIC DIRECTOR'S MESSAGE

The Department has progressed much in its journey. The newsletter reflects those positive vibes in its coverage of news and achievements of faculty and students. Hearty Congratulations.

-Prof. A. Sesha Rao

#### PRINCIPAL'S MESSAGE

It is indeed great pleasure to see the full splendor of the department in this news letter through several activities and academic accomplishments. Kudos to the team behind this great effort!

-Dr. J. Sudhakar

#### HEAD OF THE DEPARTMENT MESSAGE

With great pleasure, I am really elated to tell that the primary focus of the department is to empower our students with overall development. We, the Team – CSE are working to nurture the students with multi-dimensional skill sets and to focus on Outcome Based Education by innovative pedagogy, Industry-Academic interaction and doing projects etc. I wish this New Year would give great success ahead.

- Dr. K. Vijaya Kumar

#### VISION:

To evolve into a center of excellence and to empower women in emerging areas of Computer Science and Engineering

#### MISSION:

- ▶ To train students to analyze, design, develop and test software applications.
- ▶ To impart technical expertise in sustaining the needs of the IT industry.
- ▶ To foster research activities and entrepreneurial skills in emerging technologies.
- ▶ To inculcate lifelong learning skills and social consciousness inline with technological advancement.

A new technology named “Knocker,” which identifies objects and executes actions just by knocking on them with a smartphone. Software powered by machine learning of sounds, vibrations, and other reactions will follow the users’ directions.

What separates Knocker from existing technology is the sensor fusion of sound and motion. Previously, object identification used either computer vision technology with cameras or hardware such as RFID (Radio Frequency Identification) tags. These solutions all have their limitations. For computer vision technology, users need to take pictures of every item. Even worse, the technology will not work well in poor lighting situations. Using hardware leads to additional costs and labor burdens.

Knocker, on the other hand, can identify objects even in dark environments only with a smartphone, without requiring any specialized hardware or using a camera. Knocker utilizes the smartphone’s built-in sensors such as a microphone, an accelerometer, and a gyroscope to capture a unique set of responses generated when a smartphone is knocked against an object. Machine learning is used to analyze these responses and classify and identify objects.
